Exhibit A

Origin and Breeding History of the Variety

Exhibit A -

"SRF 307B" is a composite of 20 brown hilum lines from the variety SRF 307 selected in the F₄ generation. Seed of SRF 307 has both brown and black hilum types. The parentage of SRF 307 is Wayne (7) x D61-5141. The parentage of D61-5141 is Dorman (5) x PI 181537. All breeding and selection was carried out at the Soybean Research Foundation, Inc. under the supervision of Dr. Arnold L. Matson.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$50.00 fee to U.S. Dept. of Agriculture, Consumer and Marketing Service, Grain Division, Hyattsville, Maryland 20782. Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety.
- 12a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 12b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 12c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 12d Provide complete data indicative of novelty. Seed and plant specimens may be submitted and seeds submitted may be sterile. Where possible, include photographs of plant comparisons, chemical tests, etc.
- 12e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

Exhibit B

Botanical Description of the Variety

In all aspects except hilum color, SRF 307B is indistinguishable from SRF 307. Its seed is round, seed coat shiny yellow, and hilum brown. The trifoliate leaves are lanceolate in shape, flowers white, pod color brown, pubescence tawny, and growth habit indeterminate. It is of Group III maturity. SRF 307B is very similar to Wayne in plant type, seed coat color, pod color, flower color, and maturity. It differs from Wayne mainly in leaf shape, seed size, number of seeds per pod, and hilum color. Leaf shape of SRF 307B is lanceolate - Wayne ovate, seed size 15.4 grams/100 seeds compared to 16.1 grams/100 seeds for Wayne. SRF 307B produces a high proportion of 4 seeded pods, the % will vary with rate of planting, soil type, and weather but in all cases will be higher than Wayne grown under same conditions. An occasional 5 seeded pod may be found in SRF 307B. 5 seeded pods are very rare in Wayne if they occur at all. SRF 307B has brown hilum - Wayne black.

Data Indicative of Novelty

SRF 307B is very similar to its recurrent parent, Wayne, except that (1) the trifoliate leaves are lanceolate in shape, (2) the hilum color is brown, (3) a larger percentage of the pods bear 4 seeds, and (4) seed size is slightly smaller.

Exhibit D - Data Indicative of Novelty

There are only three varieties of SRF 307B maturity whose leaves are lanceolate in shape, SRF 300, SRF 307, and SRF 307B. SRF 300 has black hilum seed, SRF 307 has both brown and black hilum seed, and SRF 307B has only brown hilum seed. All three varieties are most similar to the Wayne variety. The following data indicates that SRF 307B is different from Wayne.
